

TRAFFIC ENGINEERING SECTION

2002 Strategic Plan Summary

MISSION

To provide regional leadership and expertise in traffic maintenance, engineering, and construction; to improve and facilitate the safe and efficient movement of traffic throughout the county road system; and to provide prompt response to traffic concerns.

VISION

Over the next several years, King County's population is predicted to grow significantly, resulting in increased automobile, pedestrian, and bicycle traffic and congestion. Public/political scrutiny and expectations are also expected to escalate, while the Section continues to face limited resources. These challenges will be met by utilizing emerging technologies, emphasizing professional training, promoting regional services, and seeking innovative new solutions to increase productivity, program efficiency, and public confidence.

OPERATING VALUES

We are a highly dedicated professional team deeply committed to providing King County citizens with a safe and efficient road system. The Section will continue to serve internal and external customers with the highest standards and responsiveness while working to increase customer trust. Both as county employees and as individuals, we believe in accountability, honesty, teamwork, respect, professionalism, equal opportunity, and organizational effectiveness.
